Scott De Leon
Water Resources Director

Marina Deligiannis
Deputy Water Resources Director

HISTORICAL WATER LEVELS OF CLEAR LAKE

The level of Clear Lake is measured in reference to the "RUMSEY GAGE" which was established by Captain Rumsey at Lakeport in 1873.

Zero Rumsey considered the natural low water level of Clear Lake. Zero Rumsey is equal to 1318.257 feet above mean sea level. A full lake, by definition, is reached when the lake measures 7.56 feet on the Rumsey Gage.

The level of Clear Lake is controlled by Cache Creek Dam, which was constructed on Cache Creek in 1914. This dam is owned and operated by Yolo County Flood Control and Water Conservation District and is operated in conformance with two court decrees. The Gopcevic Decree of 1920 stipulated that the lake shall be operated between Zero and 7.56 feet, except for unforeseen storms that raise the level faster than the Cache Creek channel capacity can draw down. In that event the level may go up to 9.0 feet, but not for a period of more than 10 consecutive days. It must be noted that with a full lake, the outlet capacity of Cache Creek is limited to 2,540 cubic feet per second. During the January and March 1995 storms, peak inflows of over 50,000 cfs occurred. Due to the limited outflow and high inflows, it is physically impossible to comply with the 10 day requirement.

Statistically the following peak flood levels can be expected on Clear Lake:

10% chance each year	10.04 feet
2% chance each year	11.74 feet
1% chance each year	12.34 feet
0.2% chance each year	13.84 feet

The Solano Decree of 1978 (revised 1995) very specifically outlines the operation of Clear Lake for Yolo irrigation purposes. If the lake is full on May 1, Yolo may withdraw 150,000 acre-feet of water and the level on October 31 may not be below 1.25 feet Rumsey. If the lake is 3.22 feet or lower on May 1, no water may be released. Evaporation on Clear Lake through the average summer is 3 feet.

As a point of interest, when Clear Lake is full it has a surface area of 43,790 acres and contains 1,155,000 acre-feet of water.

At zero the surface area is 39,170 acres with a capacity of 842,000 acre-feet.

For more detailed information please contact the Lake County Water Resources Department.
